| <p>6. Description of content: Mefentrifluconazole is an approved active substance in Great Britain (GB). An application was received by the Health and Safety Executive to set new Maximum Residue Levels (MRLs) for various commodities (listed in section 3). Following assessment, new MRLs have been introduced to accommodate new authorizations of a plant protection product in GB and to set import tolerances. The new MRLs are all an increase from those previously in force.</p> <p>The Evaluation Report/Reasoned Opinion supporting the new MRLs is available at the following link: The evaluation of new MRLs for Mefentrifluconazole in or on various commodities</p> <p>The residue levels arising in food and feed from the notified uses result in consumer exposures below the toxicological reference values. As the residue levels exceed the current MRLs in force, new MRLs are being adopted.</p> |
