<b>6. Description of content:</b> Health Canada's Food Directorate completed a detailed safety assessment of a food additive submission seeking approval for the use of the bacterium <i>Carnobacterium maltaromaticum</i> strain CB1 ( <i>C. maltaromaticum</i> CB1) to limit or inhibit the growth of <i>Listeria monocytogenes</i> in various meat and poultry products. <i>C. maltaromaticum</i> CB1 is already permitted for use in Canada as a preservative on four standardized meat products, namely vacuum-packed wieners, vacuum-packed sliced roast beef, vacuum-packed sliced cooked ham, and vacuum-packed sliced cooked turkey. As no safety concerns were raised through Health Canada's assessment the Department has enabled the food additive use of <i>C. maltaromaticum</i> CB1 described in the information document below by updating the <i>List of Permitted Preservatives</i> <a href="http://hc-sc.gc.ca/fn-an/securit/addit/list/11-preserv-conserv-eng.php">http://hc-sc.gc.ca/fn-an/securit/addit/list/11-preserv-conserv-eng.php</a> , effective 1 June 2017. The purpose of this communication is to publically announce the Department's decision in this regard and to provide the appropriate contact information for any inquiries or for those wishing to submit any new scientific information relevant to the safety of this food additive.
