Each portion of those commodities to which is analyzed in Japan is "husked seeds" or "with the peels removed", while that of Codex is "whole commodity". As such, Japan proposes MRL in rice (brown rice) (0.05 ppm) based on residue data from supervised trials which were conducted according to the Good Agricultural Practices (GAPs) in Japan, instead of Codex MRL. Japan also has decided to delete the current MRL in unshu orange (pulp) because information necessary for setting MRLs (i.e. the use of this pesticide and residue trial data for such commodities) is not available.</p> <p><u>Loquat:</u> Japan decided to delete MRL in loquat and the uniform limit (0.01 ppm) will be applied to loquat. This limit accords with Codex MRL in loquat.</p>
