6. Description of content: Proposed maximum residue limits (MRLs) for the following agricultural chemical Pesticide/Veterinary drug: Diflubenzuron
7. Objective and rationale: <input checked="" type="checkbox"/> food safety, <input type="checkbox"/> animal health, <input type="checkbox"/> plant protection, <input type="checkbox"/> protect humans from animal/plant pest or disease, <input type="checkbox"/> protect territory from other damage from pests.

8. Is there a relevant international standard? If so, identify the standard:

Codex Alimentarius Commission (e.g. title or serial number of Codex standard or related text):

Pesticide/Veterinary drug Residues in Food and feed - Pesticide/Veterinary drug Index - 130 - Diflubenzuron

World Organization for Animal Health (OIE) (e.g. Terrestrial or Aquatic Animal Health Code, chapter number):

International Plant Protection Convention (e.g. ISPM number):

None

Does this proposed regulation conform to the relevant international standard?

Yes No

If no, describe, whenever possible, how and why it deviates from the international standard:

Rice (brown rice)

The portion of commodities to which MRLs apply and which are analyzed are different from that of Codex for some commodities such as rice (brown rice). The portion of the commodity to which is analyzed in Japan is "husked seeds", while that of Codex is "whole commodity". As such, Japan has decided to delete the current MRL in rice (brown rice) because information necessary for setting MRLs (i.e. the use of this pesticide and residue trial data for such commodities) is not available, and the uniform limit (0.01 ppm) will be applied to rice (brown rice). This limit accords with Codex MRL in rice (brown rice).

Loquat (Pome fruits)

The portion of commodities to which MRLs apply and which are analyzed are different from that of Codex for some commodities such as loquat. The portion of the commodity to which is analyzed in Japan is "whole commodity after removal of stems, skins and stones", while that of Codex is "whole commodity after removal of stems". As such, Japan has decided to delete the current MRL in loquat because information necessary for setting MRLs (i.e. the use of this pesticide and residue trial data for such commodities) is not available, and the uniform limit (0.01 ppm) will be applied to loquat.

Peach

The portion of commodities to which MRLs apply and which are analyzed are different from that of Codex for some commodities such as peach. The portion of the commodity to which is analyzed in Japan is "whole commodity after removal of skins and stones", while that of Codex is "whole commodity after removal of stems and stones". As such, Japan proposes MRL in peach (0.1 ppm) based on residue data from supervised trials which were conducted according to the Good Agricultural Practices (GAPs) in Japan, instead of Codex MRL.

Dried pepper

The MRL of 3 ppm in other solanaceous vegetables has been set on the basis of the Codex MRL. MRLs in raw agricultural commodities apply to their processed commodities (including dried pepper) taking into account the processing factors (the JMPR estimated the processing factor of 7 for dried pepper). Therefore, Japan decided not to set MRL in dried pepper.

9. Other relevant documents and language(s) in which these are available:

Food Sanitation Act (available in English). When adopted, these MRLs are to be published in Kampo (Official Government Gazette). (available in Japanese)
