<p>7. Objective and rationale: <input checked="" type="checkbox"/> food safety, <input type="checkbox"/> animal health, <input type="checkbox"/> plant protection, <input type="checkbox"/> protect humans from animal/plant pest or disease, <input type="checkbox"/> protect territory from other damage from pests.</p>
<p>8. Is there a relevant international standard? If so, identify the standard:</p> <p><input checked="" type="checkbox"/> Codex Alimentarius Commission (e.g. title or serial number of Codex standard or related text):</p> <ul style="list-style-type: none"> - CAC/MRL 1 Maximum Residue Limits (MRLs) for Pesticides 2009 - CAC/MRL 2 Maximum Residue Limits for Veterinary Drugs in Food 2011 - CAC/MRL 3 Extraneous Maximum Residue Limits (EMRLs) 2001 - and subsequent variations to relevant standards as adopted or revoked by the Commission <p><input type="checkbox"/> World Organization for Animal Health (OIE) (e.g. Terrestrial or Aquatic Animal Health Code, chapter number):</p> <p><input type="checkbox"/> International Plant Protection Convention (e.g. ISPM number):</p> <p><input type="checkbox"/> None</p> <p>Does this proposed regulation conform to the relevant international standard?</p> <p><input type="checkbox"/> Yes <input checked="" type="checkbox"/> No</p> <p>If no, describe, whenever possible, how and why it deviates from the international standard: Certain proposed MRLs align with established Codex MRLs. These are detailed in section 1.3.1 of the assessment summary and in section 6, 'Results of Assessment' in SD1.</p> <p>The scientific methodology used by Australia to establish MRLs is consistent with international best practice. Countries set MRLs according to the good agricultural practice (GAP) or good veterinary practice (GVP) applicable to their region to ensure the safety and quality of the food. Agricultural and veterinary chemical use patterns differ between different production regions and countries as pests, diseases and environmental factors vary. This means that Australian MRLs for agricultural and veterinary chemicals in food may differ from Codex standards.</p>
