6. Description of content: This alert is for an amendment to the seeds for sowing import health standard. The amendment adds emergency measures to effectively manage the risk of <i>Tomato mottle mosaic virus</i> (ToMMV) on the seed for sowing pathway for the hosts <i>Capsicum</i> spp. (pg 39-40) and <i>Solanum lycopersicum</i> (133-135). The import health standard describes import requirements for seeds for sowing imported into New Zealand. MPI's emergency measures to manage ToMMV on the seeds for sowing pathway are: The inclusion of ToMMV as a quarantine pest in the specific requirements for <i>Capsicum</i> and <i>lycopersicum</i> in the seeds for sowing import health standard. The requirement of a phytosanitary certificate additional declaration to certify that the seeds were either: Sourced from a 'pest free area', free from <i>Tomato mottle mosaic virus</i> ; OR Sourced from a 'pest free place of production', free from <i>Tomato mottle mosaic virus</i> ; OR Officially tested, on a representative sample of a minimum of 3000 seeds officially drawn according to the ISTA or AOSA sampling methodology, using an NPPO-approved ELISA or NPPO-approved PCR testing method and found free from <i>Tomato mottle mosaic virus</i> . Testing is required to be completed offshore prior to export, or on arrival in New Zealand.

This decision is based on recent interceptions at the border of ToMMV on <i>S. lycopersicum</i> seeds for sowing imported into New Zealand and a Pest Risk Assessment.
