8. Nature of the urgent problem(s) and reason for urgent action: This is a notification of the emergency measures that were implemented by the New Zealand Ministry for Primary Industries (MPI) on 6 September 2013 as follows. <i>Pseudomonas syringae</i> pv. <i>actinidiae</i> (Psa) was detected for the first time in New Zealand in 2010. At that time, MPI implemented an ongoing official control programme to manage the pathogen within New Zealand. MPI also ceased issuing import permits for <i>Actinidia</i> nursery stock at that time. An urgent amendment was made to MPIs IHS 155.02.06: Importation of Nursery Stock on 6 September 2013 to formally suspend the <i>Actinidia</i> schedule of the IHS. This was done as a pest risk analysis was required to ensure that appropriate phytosanitary measures could be developed for Psa. (Also MPIs emerging risk system and hazard identification processes identified a number of other organisms potentially associated with the importation of <i>Actinidia</i> germplasm which could require specific phytosanitary measures.) MPI has since initiated a full pest risk analysis for <i>Actinidia</i> nursery stock (including cuttings, plants in tissue culture and pollen) according to the principles of ISPM 11, and will amend and re-issue the <i>Actinidia</i> schedule after the analysis is completed and appropriate measures developed.
