NOTIFICATION

Corrigendum

The following communication, received on 16 March 2021, is being circulated at the request of the Delegation of Canada.

Proposed Maximum Residue Limit for Difenoconazole: Correction

This corrigendum clarifies the maximum residue limit proposed for radish tops cited in notification G/SPS/N/CAN/1370. The notification proposed a 8.0 ppm maximum residue limit for radish tops; however, based on the current Residue Chemistry Crop Groups (<https://www.canada.ca/en/health-canada/services/consumer-product-safety/pesticides-pest-management/public/protecting-your-health-environment/pesticides-food/residue-chemistry-crop-groups.html#a4>), the crop descriptor should have been radish leaves, which is a commodity under Crop Subgroup 4-13B. Furthermore, based on the submitted residue data, the MRL of 35 ppm for Crop Subgroup 4-13B applies to potential residues of difenoconazole in radish leaves.
