6. Description of content: This draft resolution contains provisions on the regularization of food and packaging under the competence of the National Health Surveillance System (SNVS) intended for supply in the national territory. In workshops held with health surveillance, the low effectiveness of current regulatory procedures for food regularization was identified with the following consequences: lack of access to information about regularized products; lack of clarity of regulation; difficulties with food categorization; lack of definition of how this risk is understood; insufficient technical information resulting in inadequate controls, especially for higher risk products; insufficient operational capacity of analytical laboratories; forms of regularization in insufficient quantity (registration or exemption from registration), considering the variability of existing foods and their different levels of risk; regulatory gaps, among others. Thus, given the whole scenario found in the analysis of the problem, among other measures, the need for regulatory changes to solve the main problem is pointed out. This regulation will be also notified to the TBT Committee.
