NOTIFICATION

Corrigendum

The following communication, received on 3 May 2023, is being circulated at the request of the Delegation of Canada.

Proposed Maximum Residue Limit for Pyraziflumid: Correction

This corrigendum concerns the raw agricultural commodities indicated in part 6 of the English and French notification G/SPS/N/CAN/1427. The notification reports the maximum residue limits (MRLs) proposed by Health Canada's Pest Management Regulatory Agency (PMRA) as:

MRL (ppm)¹ Raw Agricultural Commodity (RAC) and/or Processed Commodity

6.0	Bushberries (crop subgroup 13-07B)
4.0	Caneberries (crop subgroup 13-07A)
2.0	Stone fruits (crop group 12-09), raisins
1.5	Small fruits vine climbing, except fuzzy kiwifruit (crop subgroup 13-07F)
0.4	Pome fruits (crop group 11-09)
0.03	Tree nuts (crop group 14-11)

¹ ppm = parts per million

The MRLs were proposed as imported commodities from the United States, with pending US registration of the chemical and establishment of American tolerances. In addition to the import MRL application, applications were submitted for Canadian registration of the use of pyraziflumid on apples alone, at a proposed MRL of 0.4 ppm (as apples are part of crop group 11-09). Given that the American registration decision remains pending, the application for the import MRLs has been withdrawn in Canada. As such, no import MRLs for pyraziflumid will be established at this time. Health Canada will establish an MRL on apples alone:

MRL (ppm)¹ Raw Agricultural Commodity (RAC) and/or Processed Commodity

0.4	Apples
-----	--------

¹ ppm = parts per million
