Countries usually set MRLs according to the Good Agricultural Practice (GAP) applicable to their region. Agricultural chemical use patterns differ between different production regions and countries as pests, diseases and environmental factors vary. This means that Brazilian MRLs for agricultural chemicals in food may differ from Codex standards. However, when a product differs from Brazilian MRLs, but is in conformity to Codex standards, it may be imported, provided that the risk assessment does not indicate an unacceptable risk to Brazilian consumers.</p>
